

Plymouth Car Park

Zefyr design, supplied and installed architectural screening systems to a multi story car park in Plymouth, Derriford Hospital. A stainless steel living wall screening system has been installed to the first floor of the building using cross hatching wire designed for the plants to grow up to produce the green walling system. A bespoke metal screening was fitted to the second and third floors of the car park and a bespoke timber screening system was installed to the fourth and fifth levels of the car park. The metal and timber screening systems were supplied in a modular format for rapid installation.
