

Corlitts Lake Visitor Centre

Zefyr supplied and installed AERO-X-200 solar shading in a circular format to harness the buildings distinctive character and sublime setting. The circumference of the roof was fitted with 36 faceted solar shading sections to fully cover the 360o structure coated in a metallic silver polyester powder to compliment the surrounding environment and building façade.

KEY POINTS

Client

Colnbrook Visitor Centre

Customer

A Harfield Bros.
(Contracting) Ltd

Location

Colnbrook, England

Product

Aero-X 200 Horizontal Solar
Shading

Material

Extruded Aluminium

"We are very pleased that Zefyr worked with us on the design and build project to detail the brise soleil canopy. Particular attention to the overall geometry of the building and the junction detailing was required to create the required visual appearance. Zefyr produced an excellent service at the tender, detailing, production and installation stages of the project. Given the opportunity we will work with them again."
